Introduction

In recent years, the amount of damage of field crops reached 17 billion yen. If it gets worse, there is a possibility that could lead to food scarcity. Therefore, we would like to offer some measures that are capable of keeping a stressless distance between people and wild animals and increase people's awareness of the problem in order to solve it.

Result

We found that many people have migrated from rural areas to urban areas in order to get jobs during a period of high economic growth. In fact, in the present age, the amount of the total population of Japan located in three major cities has increased from 390,000 in 1950s to 650,000 people in 1961. As a result, people who manage forests were decreased and forests were destroyed.
