

What can we achieve through school education?

~Do students overseas struggle with their homework?~

We are interested...

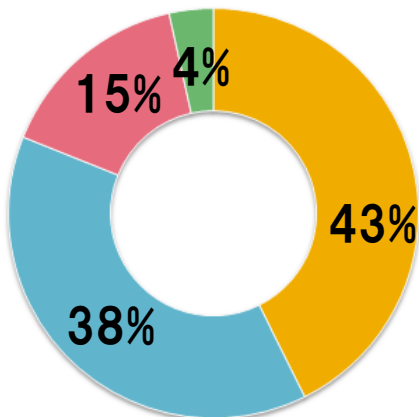

Is homework **effective?** Is there a **difference among countries?**

We **asked** the students in **Japan, Australia and China** to fill out our questions
And we researched their academic ability.

Japan

[Toyo Ushiku High School]

feeling stressed

Homework time

Weekday 53.5min
Holiday 79min

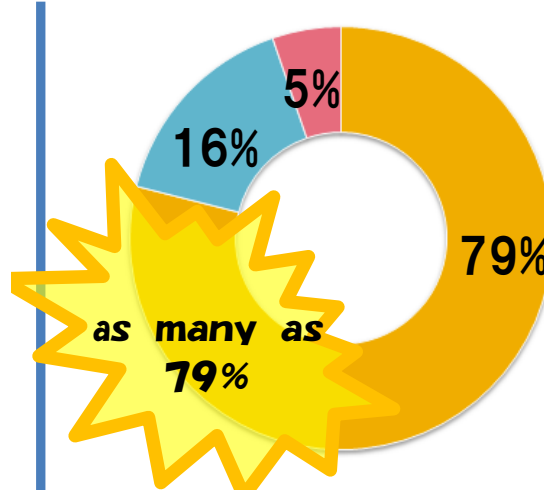

Academic level

M 5th place
S 2nd place

Australia

[Eastern Fleurieu R-12 School]

■ Strong agree ■ Agree ■ Disagree ■ Strong disagree

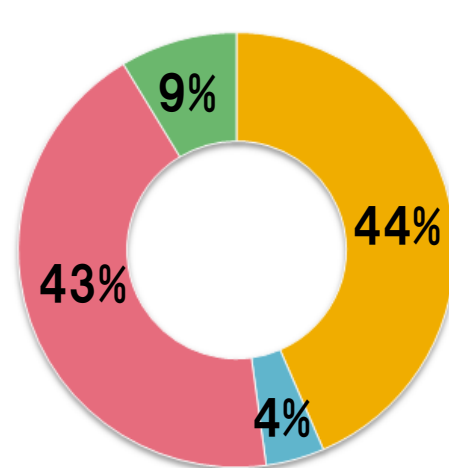

Weekday 208min
Holiday 109.5min

M 25th place
S 14th place

China

[Shanghai Foreign Language School]

Weekday 195min
Holiday 215min

M 6th place
S 10th place

M...math literacy
S...science literacy
※PISA2015

The graph shows the longer the homework time is,
the lower the academic level is.

4. Conclusion

According to our research, there is no relationship between homework time and students' academic levels. As you can see, the students in Australia and China are not smarter than those in Japan even though they are studying longer than Japanese students. Why is the Japanese score highest? We think they are less stressed about their homework. That's why we believe one of the most important things when we study is **self-direction.**
