

Let's Spread the Disaster Prevention Calendar Around the World

2808:Wakayama Prefectural Hidaka High School
Kitamata Yume Tamaki Yuko

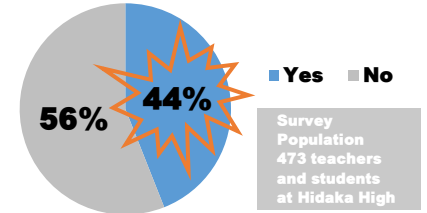

1. Introduction

Background

1. Many typhoons have hit Wakayama.
2. We expect major catastrophes will occur in the near future. (ex. Nankai trough Earthquake)
3. We are affected by the 'Normalcy bias'.

- ① Pointed out in the paper
- ② Pointed out in the news
- ③ Questionnaire results at our school

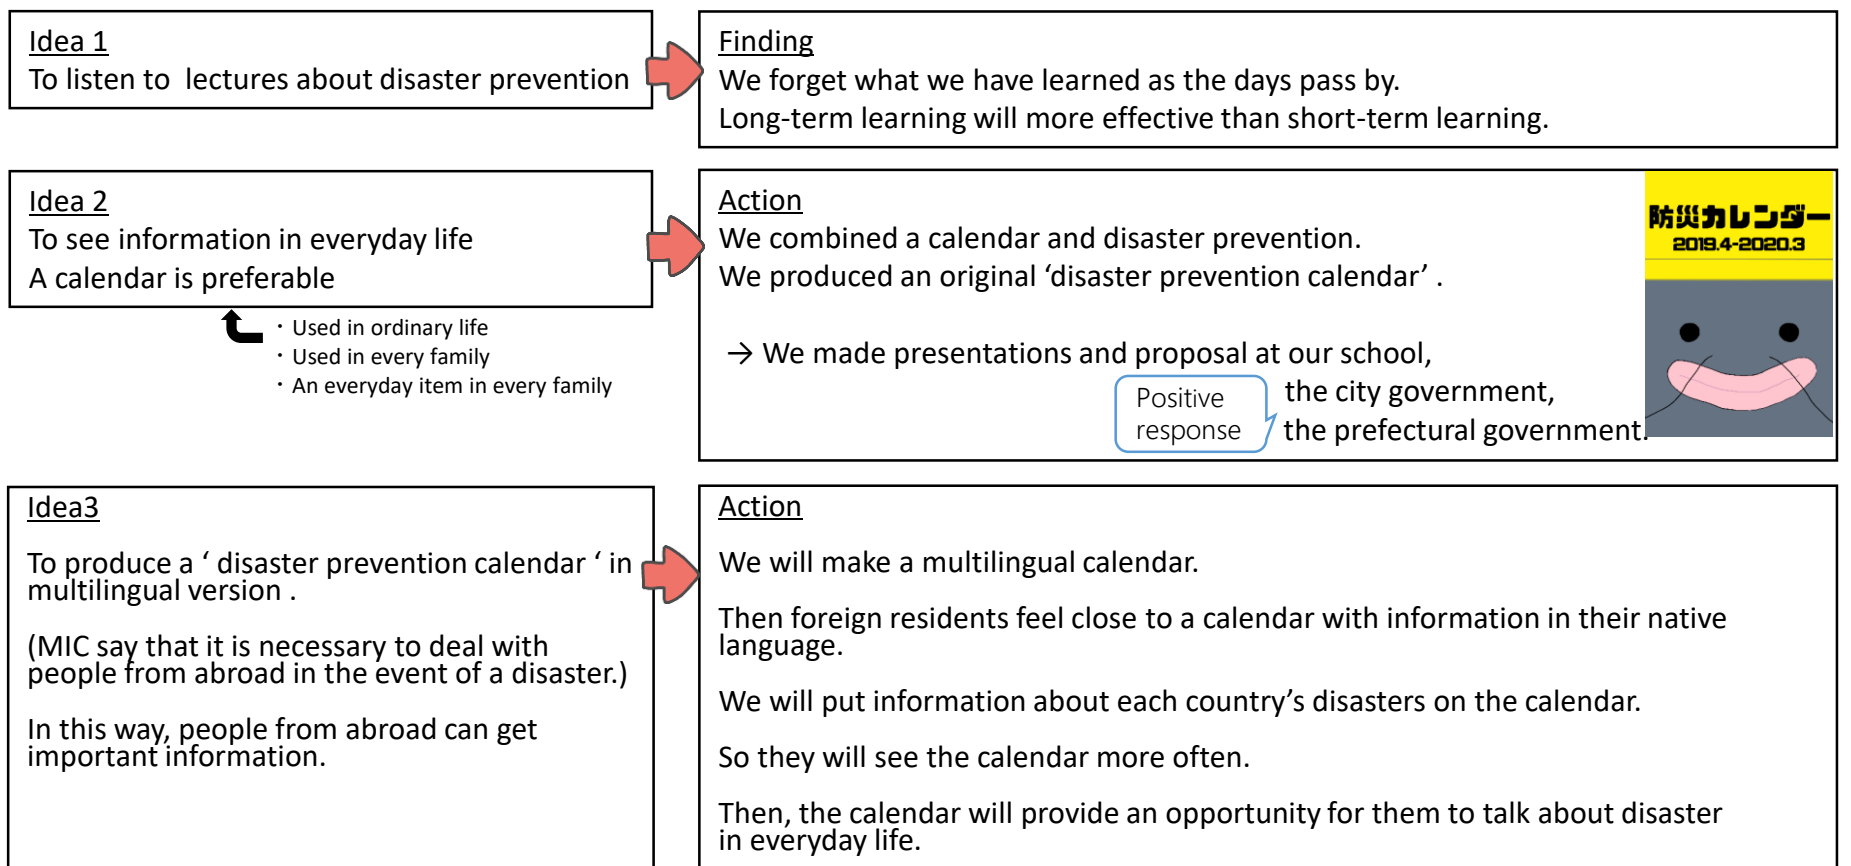

When you encountered a kind of natural disaster, did you ever think, "I am OK. It doesn't matter to me," with no reason?

2. Methods and Results

Challenge

→How can we remove the normalcy bias???

3. Conclusion

- (1) It is effective to combine a calendar and disaster prevention.
- (2) Producing and spreading the multilingual calendar bring information about disaster prevention to foreign people in Japan.

We intend to remove the normality bias by producing the calendar.
We need cooperation from you all at this forum to realize the second conclusion.

Let's make the Disaster Prevention Calendar together!
