

# Our activities to make "a world without nuclear weapons"

2650 Hiroshima Jogakuin High School

## Doomed Clock

We have two choices.

Red zone's countries have about 15,000 nuclear weapons. If we don't take actions, the world would be more and more danger.

*In the past*

### Peace Monument Tour

In 1982, our school started guiding people around the Peace Memorial Park. This activity has the longest history in our activities. By guiding visitors, we are able to deepen our knowledge and gain a sense of responsibility and ownership.

### Hiroshima Archive

Hiroshima Archive is an interactive website that shares testimonies of *hibakusha*. Jogakuin students interview and upload these testimonies. You can see videos and read testimonies in both English and Japanese of what happened in Hiroshima on August 6<sup>th</sup> 1945. When visitors leave their thoughts and comments on a testimony, a blue line appears and connects them to the testimony. In short, this blue line connects Hiroshima Archive with people from all over the world.

Cooperators

# JOIN US!!

### Collecting Signatures

We are collecting signatures to abolish nuclear weapons on a monthly basis. We are working together with Mayors for Peace 2020 vision to eliminate all nuclear weapons. We submit these signatures to the U.N. We have collected 549,145 signatures over the last 10 years.

### Colorized black-and-white photos

Colorized photos give us more powerful and vivid images. We colorize photos taken before and just after the atomic bombing in order to help people realize that people in those days were leading ordinary everyday lives just like us. These photos also help survivors remember their experiences vividly.

### Workbook

Our workbook is designed to help people, who come to Hiroshima to study about peace, experience Inquiry-Based Learning. Using this workbook and app, people can conduct fieldwork such as visiting peace monuments and trace the actual evacuation routes.

### AR app for Visually Impaired

In order to help the visually impaired with their peace study, we have developed the Voice Guide System of Peace Monuments and AR app with the help of Dr. Hidenori Watanabe, Prof. at The University of Tokyo. We're planning to make different apps for those with various disabilities.

*For the future*

More and more people are becoming interested in our peace activities, and the importance of nuclear abolition.

We will continue to give workshops and improve our guiding tools, hoping people in every country will realize how nuclear weapons are terrible and unfair. We hope they take action in their countries to abolish nuclear weapons.
